Special Tools and Accessories**

ERSA GmbH

Soldering Division: Tools & Inspection Systems

Greetings

Dear Valued Customer

It is once again a pleasure for me to extend my personal greetings to our most valued customers. Two years have now come and gone since the printing of our last ERSA tools catalog. The emphasis at ERSA over the past several years, and at all other major soldering equipment manufacturers, was lead-free preparation. As companies were developing their strategy to phase out SnPb and to phase in to a lead-free production, manufacturers like ERSA were called to the task of providing the necessary process guidance. Looking back over these last two years, ERSA is proud to say that we have been practising this commitment in a most successful fashion, enjoying the most successful years in our company's 85-year history.

Today, the expectations of our valued customers are a bit different. Strategies have already been made for the most part for the implementation of lead-free. We now find ourselves in the last stage where electronic manufacturers will be finalizing their production equipment decisions. Our experience over the years of preparing for lead-free implementation, and our many machines out in the field that have been running lead-free already since 1999, have shown us that the greatest demands will be placed on the soldering equipment. It is for this reason that ERSA's engineering staff has placed their entire efforts in realizing truly innovative soldering solutions.

As process windows become smaller, our job becomes more difficult. True innovation demands more than just a nice slogan, a catchy word. Today's equipment and stations must be intelligent themselves but intuitive for the user. The interactivity between operator and stations must be greater, and the interactivity between stations themselves must be greater. Ingenious solutions, engineered with precisely these demands in mind, make up today's ideal soldering tool!

As the inventor of the first electric soldering iron for production use in 1921, ERSA is very proud to introduce one of the smallest, lightest, most powerful and most intelligent soldering irons in the world specifically developed for lead-free, the ERSA *i*-Tool and *i*-CON.

The new 150 W micro heating element technology (patent pending) of the revolutionary *i*-Tool allows for similar performance as compared to soldering irons with expensive heating cartridge tips, but offers standard low-cost, exchangeable tips. The truly innovative Process Window Alarm notifies operators when the soldering iron tip temperature is outside a specified process window. Three power levels offer maximum power and control (no overshoot) for all soldering applications. The ERSA *i*-CON offers "One Touch" easy to use operation with large, multifunctional display, automatic tool detection, as well as the optional *i*-Set tool for automatic downloading of settings to all stations in factory.

We have accepted the challenge faced by the new demands of lead-free. We have acted by responding with truly innovative solutions which add value to our customers' operations in all areas of soldering – hand soldering, rework soldering, wave, reflow and selective soldering, as well as solder joint inspection. We look forward to future challenges, and to knowing with confidence that our customers have their soldering operations fully under control.

As you go through the pages of our newest catalog before you, please know that we have done our best to inform, but not to overwhelm. We trust that you will be guided to the appropriate tool for your soldering task. Nothing, however, can replace the true technology transfer and applications-oriented problem solving that can only take place during a personal visit to your facility. Our global sales network is made up of the best trained and most professional local distributors the industry has to offer. We look forward to making your soldering opportunities into success stories.

My best wishes for perfect solder joints, and my sincerest regards,

Mark Cannon
President and Chief Operating Officer
ERSA GmbH

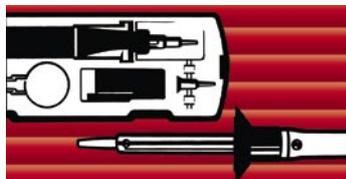

Mark Cannon

The World of ERSA Innovation is this year's motto reflecting ERSA's product strategy. Today at ERSA, "i" stands for innovative, intelligent, intuitive, interactive, ingenious, informative – simply ideal

Process-Safe and Efficient Lead-Free Hand Soldering

Lead-Free Soldering

Successfully mastering the lead-free hand soldering process

As of 1 July 2006 the elements lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyl (PBB) and biphenyl ether (PBDE) will be prohibited, and electric or electronic equipment and assemblies containing these substances can no longer be offered on the market.

This means that, in many cases, manufacturers of electronic products will have to say goodbye to the established soft solders which are based on tin and lead.

Hand soldering represents a real challenge for lead-free soldering technology. ERSA has been ready to face this challenge, and is geared up for lead-free hand soldering operations. The heating technology of the ERSA soldering stations is perfectly designed to fit the lead-free process requirements.

Guaranteeing quality in a lead-free environment will put the greatest demands on hand soldering applications. From a repeatability standpoint, all solder joints should be made with the same temperature, e. g. the tip temperature must remain constant! Hand soldering quality is completely determined by the skills of the operator and the efficiency of the soldering iron. Due to the fact, however, that irons generally do not recover lost heat fast enough, operators use high set temperatures (380 – 440 °C). These already high temperatures will need to be even higher for lead-free as the process temperature increases by 40 °C.

Three critical design demands required for successful lead-free hand soldering:

1. Accurate control not of the heating element only but also of the soldering tip during the soldering process.
2. Rapid heat recovery is essential to ensure constant soldering tip temperatures.
3. Low-cost, long-life soldering tips specially designed for lead-free.

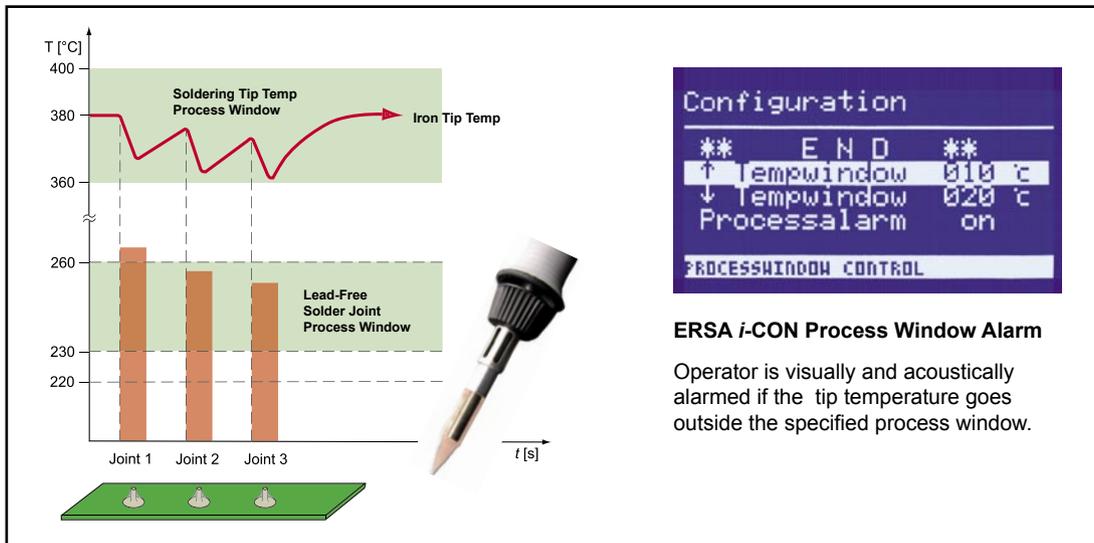

ERSA top of the range digital soldering stations allow for low temperature settings, lock-out password function, and the attachment of any of 6 special tools designed for a variety of lead-free applications. Long-life, lead-free soldering tips make the package perfect!

Don't let hand soldering and touch-up be the Achilles' Heel of your lead-free soldering operations!

ERSA i-CON - soldering station featuring innovative technology

Innovative and Efficient Heating and Control Technology

ERSA i-CON and i-Tool - the ultimate innovation in hand soldering process control

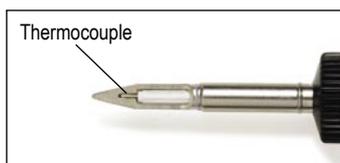

i-TRONIC control

The 150 W micro heating element (patent pending) technology with digital PID algorithm allows for rapid heat-up: from room temperature to 350 °C in approx. 9 seconds; from stand-by to 350 °C in approx. 3 seconds.

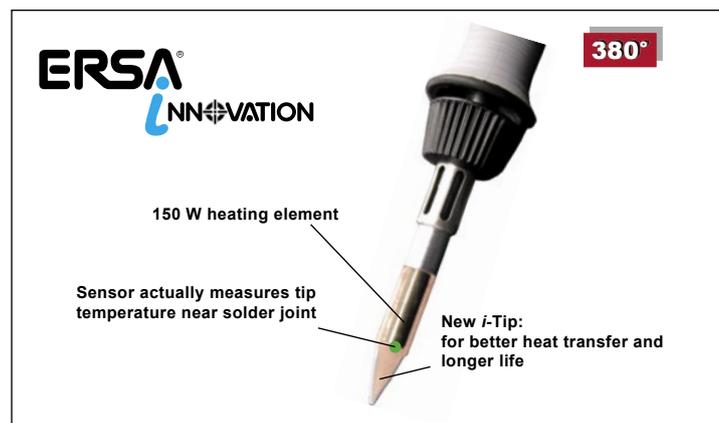

The new technology offers one of the fastest heat recoveries of all soldering irons that have exchangeable, low-cost tips, which now guarantees a stable hand soldering process. This can only be achieved via the innovative, multiple sensor heating element control technology which is a part of the patent application.

SENSOTRONIC control

The ERSA SENSOTRONIC control system with precise temperature measurement by means of thermocouples near the soldering track, where the soldering tip transfers the heat to the solder joint, has been standard at ERSA for three decades. The system guarantees the fastest possible supply of heat and a high level of temperature constancy through the entire service life.

Cross-section of internally heated tip on the Tech tool soldering iron with SENSOTRONIC control

RESISTRONIC control

With fine soldering tools for SMD technology, the ERSA RESISTRONIC temperature control system is unbeatable, since the heating elements also serve as temperature sensors. The result is a slim design and stable temperature conditions.

Cross-section of internally heated tip on the Micro tool SMD soldering iron with RESISTRONIC control

Internal heating of soldering tips

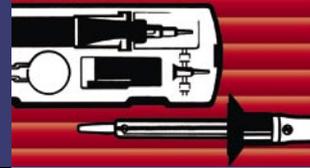

ERSA is also a pioneer in state-of-the-art soldering iron design. The internal heating of soldering tips has been the preferred method for many years.

It guarantees high thermal efficiency and the greatest possible range of application for soldering devices.

Quickfinder

Soldering Irons & Sets

The success story of ERSA soldering irons started in 1921 when the company's founder Ernst Sachs applied for patent for the first electric soldering iron.

Today, the soldering irons and sets, high-speed soldering irons and gas powered soldering irons have proven their merit many times over throughout the world, always providing the fitting solution for various applications.

ERSA Miniature Soldering Irons

The **Minor S (5 W)** and **Minityp S (6 W)** miniature soldering irons with ERSADUR tips are suitable for the finest-detailed soldering work on micro-circuits. The Minor can be operated with a 6 V transformer or a 6 V battery. Besides electronics, the Minor can also be used in watch repair, in the photographic industry and in dental technology. The Minityp can be operated with a 12 V battery.

Order no.	Description	With soldering tip	Rating / Voltage	Heating time	Max. soldering tip temperature	Weight (w/o cable)
0045BDG	Minor S soldering iron	0042BD, ERSADUR	5 W / 6 V	12 s	approx. 440 °C	6 g
0015BDH	Minityp S soldering iron	0012BD, ERSADUR	6 W / 12 V	20 s	approx. 390 °C	7 g

ERSA Microsoldering Irons

The ERSA **Multitip** series covers a wide range of applications. It stands out by its low weight and compact design (short distance between soldering tip and the handle's front part). The handle stays relatively cool while soldering. The Multitip is available for **8**, **15** and **25 W** and suitable for both micro-soldering joints and medium-sized soldering, as on distributor strips. Long-life and industrially tested PTC heating elements and internally heated soldering tips in the 15 / 25 W version provide high efficiency and fast heat supply.

Tip 260 is also heated in this especially efficient way. **16 W** power and slim design make this soldering iron an ideal aid when working on electronic assemblies in places difficult to access.

ERSA Universal Soldering Irons

Thanks to its large range of tips, the ERSA **Multi-Pro** is the ideal soldering iron when great flexibility is required. The device has a heat-resistant connecting cable. Internally heated tips provide a high level of efficiency. **ERSA 30 S**, the best selling and most tried and tested universal soldering iron, is known the world over for its sturdiness and longevity. It can be used in a variety of ways for soldering tasks in handicrafts, service and hobbies. Delivery includes a practical, easily mounted rubber stick-on support disk. The ERSA 30 S is also available with **40 W**.

ERSA Standard Soldering Irons

ERSA 50 S

052 soldering tip series
see page 43

ERSA 80 S

082 soldering tip series
see page 43

ERSA 150 S

152 soldering tip series
see page 43

The tried and proven soldering irons of the **ERSA 50 S / 80 S / 150 S** series are designed for soldering operations with a greater heat requirement, as, for example, on copper conductors with a cross-section of 2.5 mm² (ERSA 50 S, 50 W) to 6 mm² (ERSA 150 S, 150 W).

The devices are supplied with an angled soldering tip as standard. Thanks to their elaborately generated "protective coating", ERSADUR tips have a much longer service life than their simple mates.

Other areas of application of the ERSA standard soldering irons include soldering thin sheet metal and lead glazing (ERSA 150 S).

Order no.	Description	With soldering tip	Rating / voltage	Heating time	Max. soldering tip temperature	Weight (w/o cable)
0055JD	ERSA 50 S soldering iron	0052JD, ERSADUR	50 W / 230 V	approx. 3 min	approx. 400 °C	160 g
0085JD	ERSA 80 S soldering iron	0082JD, ERSADUR	80 W / 230 V	approx. 3 min	approx. 410 °C	220 g
0155JD	ERSA 150 S soldering iron	0152JD, ERSADUR	150 W / 230 V	approx. 3 min	approx. 450 °C	245 g

ERSA Workshop Soldering Irons

ERSA 550

552 MZ and 552 MD soldering tip series
see page 43

ERSA 200 / 300

202 / 302 MZ and 202 / 302 MD soldering tip series see page 43

The **ERSA 200, 300 and 550** hammer soldering iron series are especially suitable for sheet metal processing, installation work and for soldering commutators and copper bus bars.

Hammer soldering irons have also proven their merit in automotive body adjustments and lead glazing.

Order no.	Description	With soldering tip	Rating / voltage	Heating time	Max. soldering tip temperature	Weight (w/o cable)
0200MZ	ERSA 200 hammer soldering iron	0202MZ, nickel-plated	200 W / 230 V	approx. 5 min	approx. 470 °C	550 g
0200MD	ERSA 200 hammer soldering iron	0202MD, ERSADUR	200 W / 230 V	approx. 5 min	approx. 470 °C	550 g

0550MZ	ERSA 550 hammer soldering iron	0552MZ, nickel-plated	550 W / 230 V	approx. 7 min	approx. 600 °C	1,770 g
0550MD	ERSA 550 hammer soldering iron	0552MD, ERSADUR	550 W / 230 V	approx. 7 min	approx. 600 °C	1,770 g

ERSA High-Speed Soldering Irons

The ERSA **Multi-Sprint** is an extremely light, transformer-independent solder gun with a heat-up rating up to **150 W** and an ergonomic design.

In combination with the internally heated ERSADUR long-life soldering tip, the Multi-Sprint's PTC heating element offers especially high performance. The short heat-up time makes it ideal for high-speed series soldering. The Multi-Sprint is heated only as long as the button is pressed.

The large selection of tips of the 832 / 842 series afford a wide range of applications, and not just in service and repairs.

Multi-Sprint

832 / 842 soldering tip series
see page 38 / 39

Order no.	Description	With soldering tip	Rating / voltage	Heating time	Max. soldering tip temperature	Weight (w/o cable)
0960ED	Multi-Sprint solder gun	0832EDLF, ERSADUR	150/75 W / 230 V, 50 - 60 Hz	approx. 20 s	subject to how long the button is pressed	100 g

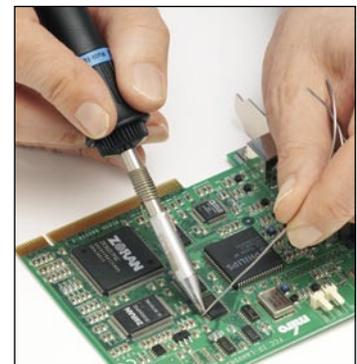

ERSA Power Soldering Iron with Temperature Control

The ERSA **Multi-TC** is a powerful, sturdy, temperature-controlled universal soldering iron with a precise temperature sensor located directly under the internally heated soldering tip. This temperature sensor registers the actual temperature in the immediate vicinity of the solder joint. The heating system can then immediately react to the heat loss and re-heat extremely fast. The high preheating power with the internal PTC heating element provides unusually fast heating. The high heating efficiency and the large selection of soldering tips and inserts serve both filigree applications in electronics and applications with standard soldering irons with power up to 150 W. Examples are classical lead glazing and Tiffany methods. By dispensing with a heavy transformer and thanks to its heat-resistant connecting cable, the ERSA Multi-TC is especially suitable for mobile use in service, maintenance and repairs.

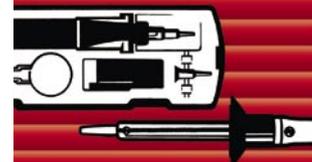

Multi-TC

832 / 842 soldering tip series see page 38 / 39
Tiffany-Set see page 11

The 832 / 842 soldering tip series make the Multi-TC a proper all-rounder

Order no.	Description	With soldering tip	Rating / voltage	Heating time	Max. soldering tip temperature	Weight (w/o cable)
0760CD	Multi-TC soldering iron	0842CD	75 W at 350 °C / 230 V, 50 - 60 Hz	approx. 34 s	250 °C - 450 °C	60 g

ERSA Soldering Iron Sets

Electronics Start-up Set, 15 W

cons. of Multitip C15 sold. iron, 0162BD / 0162KD tips, holder 0A19, antist. desold. pump, desold. wick, soldering guide and 7 g of solder. 162 soldering tip series see page 44.

Multitip-Workbox, 25 W

consisting of Multitip C25 soldering iron with soldering tips 0172LD / 0172BD, tool holder 0A18, antistatic desoldering pump and 7 g of solder, packed in a sturdy plastic case. 172 soldering tip series see page 44.

ERSA 30 S Workbox

consisting of ERSA 30 S (40 W) soldering iron, tips 0032KD / 0032BD, support disc 3N194, holder 0A18, antist. desold. pump, 7 g of solder and sponge packed in a sturdy plastic case. 032 soldering tip series see page 43.

Order no.	Description	With soldering tip	Rating / voltage	Heating time	Max. soldering tip temperature	Weight (w/o cable)
0910BD0035	Electronics Start-up Set	0162BD, 0162KD	15 W / 230 V	approx. 60 s	approx. 350 °C	28 g
0920LD0035	Multitip Workbox	0172LD, 0172BD	25 W / 230 V	approx. 60 s	approx. 450 °C	34 g
0340KD0035	ERSA 30 S Workbox	0032KD, 0032BD	40 W / 230 V	approx. 2 min.	approx. 420 °C	80 g

With the ERSA Start-up-Set or the workboxes, you can begin your soldering work right away. Besides the ERSA's "made in Germany" quality soldering iron, you will have an additional ERSA DUR long-life soldering tip, solder wire, tool holder, cleaning sponge and even an antistatic desoldering pump.

The **Electronics Start-up Set** with its 15 W Multitip soldering iron also includes a comprehensive soldering guide with helpful information all about soldering.

The **Multitip Workbox** and the **ERSA 30 S Workbox** come with a practical plastic case. The case can be used for both storage and transport. The ERSA 30 S delivers 40 W of power, while the internally heated Multitip with PTC heating element has 25 W.

ERSA Power Tiffany-Set

ERSA Power Tiffany-Set

Multi-TC with 0832VD soldering tip, chisel-shaped, 5.0 mm and additional 0832VD soldering tip; tool holder; 100 g of Tiffany solder, Sn60Pb, 3 mm \varnothing ; 25 ml of liquid flux and sponge packed in a practical plastic case.

832 / 842 soldering tip series see page 38 / 39

Order no.	Description	With soldering tip	Rating / voltage	Heating time	Temperature range	Weight (w/o cable)
0760VD0025	Tiffany soldering set	0832VD, ERSA DUR	75 W (350 °C) 230 V, 50 - 60 Hz	approx. 55 s (280 °C)	250 °C - 450 °C	60 g

The ERSA Tiffany soldering set is not only for beginners wanting to start work right away; light and slim, equipped with state-of-the-art control technology, the Multi-TC soldering iron replaces ordinary, uncontrolled irons with an output of up to 150 W. The ERSA SENSOTRONIC control system with the PT 1000 temperature sensor inside the soldering tip and near the soldering track immediately reacts to any heat loss. Practically delay-free reheating is ensured. The line voltage operated Multi-TC soldering iron with control electronics integrated in the handle has a heat-resistant connecting cable. The practical plastic case contains Tiffany solder, liquid flux, a sponge and tool holder, besides the Multi-TC soldering iron itself.

ERSA Independent 75 Gas Soldering Sets

Mobile power – wherever you want! Powerful, with comprehensive and top-quality equipment, small, handy and practically packed. The gas soldering **Independent 75 Basic Set** and **Profi Set** will meet your every need! The ergonomic, antistatic gas soldering iron with piezo ignition is ideal for service and maintenance work, especially if there is no power supply available! The continuously adjustable output of **15 - 75 W (compared with electrical soldering irons)** allows maximum soldering tip temperatures of up to 580 °C. The Independent is powered by ordinary butane as used in gas lighters. Operating time per gas filling is about 60 min. Both sets come with a practical carrying case. Besides the standard "Basic Set" equipment, the "Profi Set" contains two additional soldering tips, a hot blade for cutting high-resistance foam, a hot-gas nozzle, a deflector for heat-shrinkable sleeves and a flame nozzle for micro-welding.

Independent 75 Profi-Set

consisting of Independent 75 gas soldering iron with soldering tip 0G072KN, 0G072CN, soldering tips 0G072AN and 0G072VN, flame nozzle 0G072BE, hot gas nozzle 0G072HE, hot blade 0G072MN and deflector 0G072RE to shrink heat-shrinkable sleeves, tool holder 0A20, cleaning sponge 0006G and sponge container 0G156 packed in a practical plastic case. **G 072 soldering tip series see page 44**

Independent 75 Basic-Set

consisting of Independent 75 gas soldering iron with soldering tips 0G072KN and 0G072CN, holder 0A20, cleaning sponge and sponge container, packed in a practical plastic case.

Order no.	Description	With soldering tips 0G072 ...	Rating	Heating time	Max. soldering tip temperature	Weight

ERSA Independent 130 Gas Soldering Sets

The "big" gas soldering device from ERSÄ, the **Independent 130**, can be applied wherever demanding soldering tasks have to be performed without a power supply. Its broad range of continuously variable **25 - 130 W (compared with electrical soldering irons)** and its comprehensive line of soldering tips allow a wide variety of uses in service, installation, maintenance and repair work. The piezo ignition integrated in the device and powering by ordinary gas lighter butane ensure the easiest possible handling and great reliability. The operating time per gas filling is about 120 minutes, with a maximum soldering tip temperature of about 580 °C. Like its smaller mate, the Independent 75, the Independent 130 is also available in both set versions, namely as a **Basic Set** or **Profi Set**.

Independent 130 Profi-Set

consisting of Independent 130 gas soldering iron with soldering tip 0G132KN, soldering tips 0G132CN, 0G132AN and 0G132VN, flame nozzle 0G132BE, hot gas nozzle 0G132HE, hot blade 0G132MN and deflector 0G132RE to shrink heat-shrinkable sleeves, cleaning sponge 0006G and sponge container 0G156 packed in a practical plastic case. **G 132 soldering tip series see page 44**

Solder Baths

ERSA does not only provide a wide range of standard soldering irons, it is also the first choice when it comes to static solder baths and fitting temperature regulator.

Apart from a wide range of static solder baths with different solder capacities ERSA also provides a large selection of dynamic solder baths namely wave and selective soldering systems. The photo shows a solder bath with multiwave module of a VERSAFLOW selective soldering system.

**Leadfree
Bleifrei**

ERSA

ERSA Solder Baths

ERSA solder baths are electrically heated melting pots for tin-lead and similar alloy solders. The high-capacity ceramic heating elements are exchangeable and mounted on the pot. They are thermally insulated from the external sheet metal housing. The **T 02, T 03, T 04, T 05, T 06, T 07** and **T 25** solder baths can be switched to half-power operation. Thanks to the high temperature of approximately 600 °C the **T 02** and **T 07** baths are especially suitable for tin-plating enam-elled copper wires. All solder baths are supplied with a 1.5 m connecting cable. To enhance solder quality as well as to reduce oxide formation, and for energy-saving reasons, we recommend the RA 4500 D temperature regulator together with one of the temperature sensors mentioned below.

The **T 50 S / T 10 S** small solder baths are primarily used for tin-plating stranded wire braids, connecting leads and cable lugs.

The heat resistant special color (order no. 4HMFARBE¹) can be applied to the crucible as a protection against corrosion and wetting.

ERSA RA 4500 D Temperature Regulator

The **RA 4500 D** temperature regulator can be operated with various solder baths. The solder baths can be connected to the regulator through simple plug connectors. With its five operating programs, the RA 4500 D's easy program selection allows the user to change quickly between different solder baths. The station can also be used for simple temperature measurements (Pr5) by means of the temperature sensor (option). Its wide variety of features and great control precision (especially with ERSA solder baths) makes the RA 4500 D especially suitable for production processes with high quality requirements.

Soldering & Desoldering Stations

Integrating a soldering station with potential equalization:

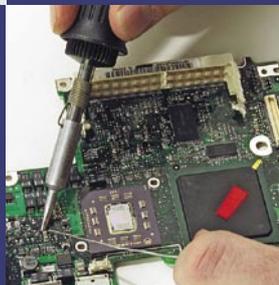

The RDS 80 soldering station can be easily integrated into an ESD working environment. The soldering station, iron and tip can be connected with high impedance (220 kΩ resistor integrated in station; tip-to-ground resistance: 220 kΩ) to the conductive work surface through the potential equalization socket on the front of the station.

Soldering irons bearing this symbol are equipped with PTC heating elements.

For many years ERSA soldering, desoldering and rework stations have proven their merit in industry, handicrafts and ambitious hobbyists. ERSA always provides the fitting station with or without digital display, for conventional or SMD soldering alike.

ERSA RDS 80 Soldering Station

The ERSA RDS 80 digital soldering station offers ERSA RESISTRONIC temperature control, tried and proven for many years and now with 80 W heating power.

The ceramic PTC heating element (positive temperature coefficient) acts as the temperature sensor in this control system and ensures extremely fast heating thanks to the high initial output.

The very high heating power and the large selection of soldering tips allow a very wide range of applications.

The heating system with the internally heated soldering tips has a high thermal efficiency. The redesigned ergonomic handle, the new housing design and the large, digital multifunctional display don't leave much to be desired.

Besides the arbitrary temperature selection between 150 °C and 450 °C, 3 fixed temperatures or 2 fixed temperatures and one stand-by temperature can be programmed.

The device also has a calibrating and power-off feature, in addition to a power bar graph display. The potential equalization socket (with an integrated 220 kΩ resistor) allows the soldering tip to be equalized with the workplace potential.

The RT 80 soldering iron has a sprayed-on, flexible PVC connecting cable; for changing the tips we recommend tip changing tool 3ZT00164 (see page 32).

ERSA ANALOG 60 Soldering Station

ANALOG 60

with Basic tool 60 soldering iron, ERSA RESISTRONIC control system
832 and 842 soldering tip series see page 38 / 39

Order no.	Description	Rating / Voltage	Heating time	Temperature range	Weight (w/o cable)
0ANA60	ANALOG 60 soldering station complete with Basic tool 60 soldering iron 0670CDJ, with soldering tip 0832CDLF and tool holder 0A41	60 W / 230 V, 50 - 60 Hz / 24 V 60 W (at 350 °C)	approx. 60 s (280 °C)	150 °C - 450 °C	60 g

The electronically temperature-controlled **ANALOG 60** soldering station is the basic model of the ERSA soldering station series. It has the tried and proven ERSA RESISTRONIC temperature control technology, with the ceramic PTC heating element serving as the temperature sensor. The high initial power enables fast heat-up.

The large selection of soldering tips allows a broad range of applications. The internal heating provides high thermal efficiency. A front-installed socket with integrated, high-impedance allows potential equalization between the soldering tip and the workplace.

The device is primarily used for smaller and medium-sized solder joints. The low-voltage operated soldering iron Basic tool 60 has a highly flexible, heat-resistant connecting cable.

ERSA ANALOG 80 Soldering Station

ANALOG 80

with Basic tool 80 soldering iron, ERSA SENSOTRONIC control system
832 and 842 soldering tip series see page 38 / 39

Order no.	Description	Rating / Voltage	Heating time	Temperature range	Weight (w/o cable)
0ANA80	ANALOG 80 soldering station complete with Basic tool 80 soldering iron 0810CDJ with soldering tip 0832CDLF and tool holder 0A41	80 W / 230 V, 50 - 60 Hz / 24 V 80 W (at 350 °C)	approx. 40 s (280 °C)	150 °C - 450 °C	50 g

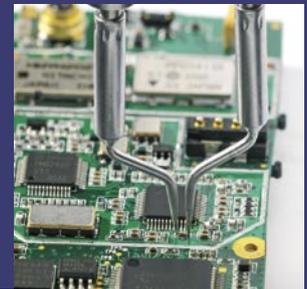

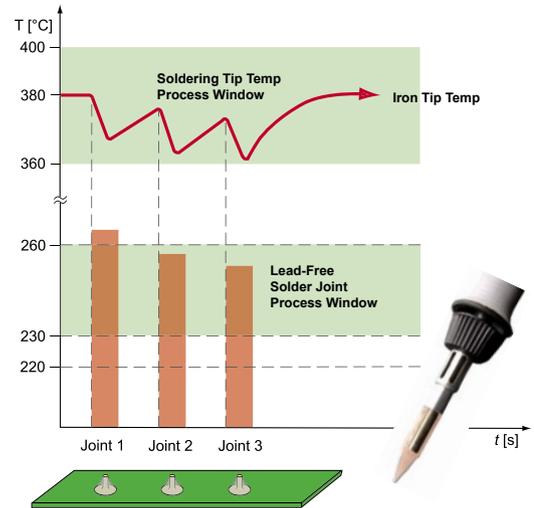

Experienced amateurs and professional users, especially in wiring harness production, etc. have for many years appreciated the unusually wide range of applications of the ERSA **ANALOG 80** soldering station and its predecessors. The light and slim Basic tool 80 soldering iron with an internally heated soldering tip has a high level of thermal efficiency. It can even replace commercially available uncontrolled soldering irons of up to **150 W** output.

The ERSA SENSOTRONIC control system with its thermocouple temperature sensor inside the soldering tip and near the soldering track immediately reacts to any heat loss. Practically delay-free reheating and high temperature constancy are ensured.

The soldering tip is connected with high impedance to the front-installed potential equalization socket.

Basic tool 80 has a highly flexible, heat-resistant connecting cable.

Antistatic Soldering & Desoldering Stations

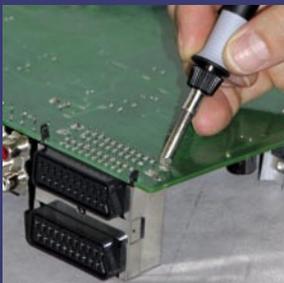

i-Set Tool

<PUSH> to Download

DOWNLOAD FROM i-SET TOOL TO iCON

High-tech soldering and desoldering, diverse applications and high-precision: easily attained with ERSA top-quality products.

Precise temperature measurement near the soldering tip and a microprocessor controlled heating system will guarantee safe lead-free soldering at low temperatures in the future. The ERSA soldering stations' high capacity ensures superior reheating. Even high-mass soldering can be carried out without problems.

ERSA ANALOG 60 A Soldering Station

ANALOG 60 A

with Ergo tool soldering iron, ERSA RESISTRONIC control system
832 and 842 soldering tip series see page 38 / 39

Order no.	Description	Rating / voltage	Heating time	Temperature range	Weight (w/o. cable)
0ANA60 A	ANALOG 60 A soldering station complete with Ergo tool soldering iron 0680CDJ, with soldering tip 0832CDLF and tool holder 0A42	60 W / 230 V, 50 - 60 Hz / 24 V 60 W (at 350 °C)	approx. 60 s (280 °C)	150 °C - 450 °C	60 g

The electronically temperature-controlled ERSA ANALOG 60 A soldering station is antistatic according to the MIL-SPEC / ESA standard and has all the positive features of the ERSA ANALOG 60. It has the tried and proven ERSA RESISTRONIC temperature control technology based on the ceramic PTC heating element and the fast heat-up characteristics. Internally heated tips guarantee high thermal efficiency. The unusually wide range of tips allows a varied range of applications. The front-installed potential equalization socket is connected with high impedance to the soldering tip. The light and slim Ergo tool soldering iron has a highly flexible, heat-resistant and antistatic connecting cable. The ANALOG 60 A soldering station is especially suitable for producing small and medium-sized solder joints. For tip changing we recommend the tip exchanger 3ZT00164 with an additional flat nose pliers and side cutter (see p. 32).

ERSA ANALOG 80 A Soldering Station

ANALOG 80 A

A 47

Holder for 832 XD mini solder bath series.
Delivery without soldering iron and mini solder bath.

The antistatic, electronically temperature-controlled high-powered ERSA ANALOG 80 A soldering station according to the MIL-SPEC / ESA-standard is the ideal tool for producing solder joints with a high heat requirement.

The light and slim Power tool soldering iron has high thermal efficiency, and can replace even ordinary uncontrolled soldering irons of up to 150 W power. The ERSA SENSOTRONIC control system with its thermocouple temperature sensor inside the soldering tip and near the soldering track immediately reacts to any heat loss. Practically delay-free reheating and high temperature constancy are ensured. The soldering tip is connected to the front-installed potential equalization socket.

The low-voltage soldering iron Power tool has a highly flexible, heat-resistant and antistatic connecting cable.

ERSA DIGITAL 2000 A Soldering Station

The ERSA **DIGITAL 2000 A** is a top-class microprocessor-controlled soldering station distinguished by its flexibility and multifunctionality. It is antistatic according to the MIL-SPEC / ESA standard and is designed for industrial use where high quality is demanded and for repairs and laboratory applications.

The device can alternatively be operated with various soldering and desoldering tools. Besides the Power tool and Tech tool universal soldering irons, the Micro tool microsoldering iron, the Cip tool desoldering pincette and the X-Tool desoldering iron can be connected.

The tools are automatically detected when inserted and the control characteristics accordingly adapted. The soldering and desoldering tips are therefore always connected with high impedance to the front-installed potential equalization socket.

The station is easy to operate and user-friendly. The desired temperatures, the unit of temperature (°C/°F), the stand-by time of 0 to 60 minutes, a tip offset and calibration feature and a three-character password-controlled lock can all be set with just three buttons and a simple menu guide. The energy feature allows you to influence the heat-up and reheating characteristics.

In addition, the soldering station has 4 programs. Each program can be separately and differently configured with the aforementioned functions.

A fixed program is assigned to each soldering and desoldering tool. The station automatically changes the program in case of a tool change.

If only one tool is used, all programs can also be used. A 5th program slot contains a temperature measuring function. For this purpose the temperature sensor DIG207 is required.

DIG20A84

DIG20A64

with Tech tool soldering iron and ERSA SENSOTRONIC control system
612 soldering tip series see page 40

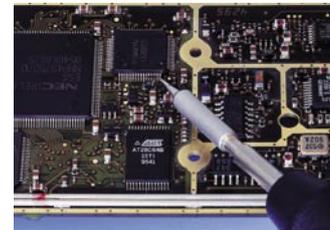

The calibration feature allows the actual soldering tip temperature to be precisely adjusted to the temperature shown in the LED display. For this purpose a suitable soldering tip temperature measuring device, such as the ERSA DTM series (see page 31), is required.

The ERSA DIGITAL 2000 A soldering station regulates the temperature through a digital PID algorithm, optimized for very precise and fast temperature control.

DIG20A27

with Micro tool soldering iron and ERSA RESISTRONIC control system
212 soldering tip series see page 42

All connectable soldering and desoldering devices have enormous power reserves thanks to the PTC heating elements located inside the tips.

At a peak temperature of 280 °C the following power is available, for example:

- Power tool – 105 W
- Tech tool – 70 W
- Micro tool – 30 W
- Chip tool – 2 x 30 W
- X-Tool – 120 W.

These power reserves also ensure safe and top-quality soldering and desoldering results.

DIG20A45

with Chip tool and ERSA RESISTRONIC control system.
422 desoldering tip series see page 41

All soldering and desoldering tools are operated at the low voltage of 24 V and have a highly flexible, heat-resistant and antistatic connecting cable.

For tip changes we recommend the tip exchanger 3ZT00164 with flat nose pliers and side cutter (see page 32).

ERSA i-CON Soldering Station

Guaranteeing quality in a lead-free environment will put the greatest demands on hand soldering applications.

Today's hand soldering operators expect a great deal from a state-of-the-art hand solder tool: a small and lightweight, ergonomically designed hand tool that does not get too hot during use, maximum power and efficiency for rapid heat-up and recovery during soldering, fast and easy tip change, as well as easy-to-use station operation and programming.

Today's QA and purchasing managers, however, have much different concerns. In order to guarantee quality, soldering stations must be designed for superior performance. The higher working temperatures and smaller process windows for lead-free hand soldering demand precise temperature control of the soldering tip and rapid heat recovery of the heating element in order to prevent cold solder joints. Low-cost, long-life soldering tips are a must from a running cost efficiency standpoint and are the major concern for the purchasing department.

To meet this challenge, ERSA is proud to introduce its newest technology (patent pending) for a state-of-the-art soldering station that has been specifically designed to meet the challenges the industry will face with lead-free implementation. The ERSA i-CON and i-Tool is an exciting innovation at the core of our existence, and will be available to the market the second quarter of 2006, just in time for the 1 July lead-free start date.

i-CON

with i-Tool soldering iron with patent pending heating technology
102 soldering tip series see page 37

Order no.	Description	Rating / Voltage	Heating time	Temperature range	Weight (w/o. cable)
01C1000A	i-CON electronic station complete with i-Tool soldering iron - 0100CDJ, with soldering tip 0102CDLF16 and tool holder 0A48	80 W / 220 - 240 VAC / 50 Hz, 150 W (350 °C)	approx. 9 s (350 °C)	150 °C - 450 °C	approx. 30 g

Innovative features of this technology

150 W micro heating element (patent pending):

Allows for standard, long-life, low-cost tips to be removed without replacing the expensive heating element each time the tip wears out.

Heat-up and recovery:

Ultra fastest heat-up and recovery of all soldering irons that have exchangeable, low-cost tips: room temp to 350 °C in approx. 9 seconds; from stand-by to 350 °C in approx. 3 seconds.

"One Touch" easy-to-use operation:

User-friendly station software with large, multifunctional display has on-line help text and easy menu navigator with i-Op control.

Automatic stand-by motion sensor:

Recognizes when the iron is being used and automatically goes into a stand-by temperature when the iron is put into its holder.

i-Set Tool:

This optional item allows for automatic downloading of station settings and lockout by acting as a type of USB stick.

Simply upload the station settings from an i-CON into the i-Set Tool.

The i-Set Tool is then plugged into any other i-CON station and all set parameters are automatically downloaded in less than 5 seconds and the station is locked out!

The fastest, safest programming and locking out of soldering stations for maximum quality control and documentation!

Process window alarm:

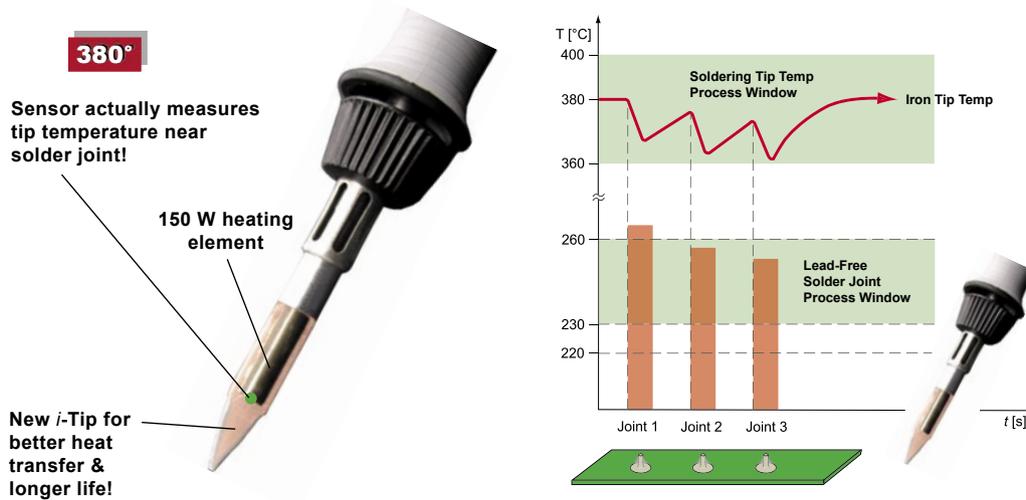

Informs operator with a visual and acoustic signal if the soldering iron tip gets too hot or too cold. QC can specify a process window in which the iron is allowed to work, and, for the first time ever in the history of hand

The i-Tool has a highly advanced PCB integrated into the handle for a level of intelligence never before seen in a soldering iron.

Safe and Innovative Lead-Free Hand Soldering

The *i*-Tool recovers so fast that all solder joints can be made with nearly the same temperature. The sensor measures the actual tip temperature very close to the tip extremity. The process window alarm assists the operators in guaranteeing repeatable quality.

soldering, it is possible to guarantee that every solder joint is made with the proper temperature!

i-Tool calibration:

Unlike other systems, the microprocessor which stores the temperature calibration of the iron is actually located in the PCB which is installed in the handle.

This now allows for each individual *i*-Tool to be calibrated independent of the soldering station meaning great time and cost savings. Only the irons need to be taken for calibration, which is much easier and faster!

Power level settings:

Allows for the use of three different power settings which control the heating element overshoot depending on the heat required.

Thus, the operator can choose the right setting for the right job – either more power or more control!

Power level “Low” guarantees NO OVERSHOOT for maximum component safety!

Lead-free *i*-Tips:

The low-cost *i*-Tips are specially plated with

the new ERSADUR LF galvanic process lasting 2 to 3 times longer than standard tips!

i-Tool soldering iron: ultra light (only 30 grams), ultra short (only 155 mm), and ultra short tip-to-grip (only 45 mm).

The *i*-CON2 is also available as double iron station with the Chip tool for SMD removal.

ERSA has succeeded in designing one of the smallest, lightest and most powerful soldering irons in the world - the ERSA *i*-Tool. The true value added for our customers lies not only in the fact that it will increase both the hand soldering quality and productivity, but also that it can realize a tremendous reduction in operational costs associated with manual soldering.

ERSA's new patent pending technology allows for a similar performance as compared to the soldering irons with expensive heating cartridge tips, but offers a standard low-cost, long-life exchangeable tip!

The ERSA *i*-CON advanced digital power supply offers ERSA's new "One Touch" easy-to-use operation with the new *i*-Op Control, as well numerous value added functions.

ERSA SMT 60 AC SMD Soldering & Desoldering Station

The ERSA SMT UNIT 60 AC is most often used in the repair of SMD PCBs. It is the basic device for soldering and desoldering the most common SMD components.

Antistatic according to the MIL-SPEC/ESA standard and therefore safe for electrostatically endangered components, this combination station comes with the Micro tool soldering iron and the Chip tool desoldering pincette.

Both are equipped with the tried and proven ERSA RESISTRONIC temperature control system, with the ceramic PTC heating elements serving as the temperature sensor. The use of these heating elements with a high positive temperature coefficient affords high heat-up power, so that the tools can be brought to the desired operating temperature very fast.

The Micro tool soldering iron and the Chip tool desoldering pincette are connected to the electronic station 0SMT603A through coded plug connectors to prevent a mix-up, and can be independently and simultaneously operated. The internal heating of the tips provides great thermal efficiency.

The soldering and desoldering tips are connected with high impedance to the front-installed potential equalization socket. Both tools are equipped with a highly flexible, heat-resistant and antistatic connecting cable. The Mini, Micro and SolderWell soldering tips (see page 42) allow Fine-Pitch components to be soldered in the shortest possible time with top solder quality. The desoldering tips of the ERSA Chip tool range from paired desoldering tips for MICROMELFs to inserts for PLCC 84 housings (see page 41).

The two duroplastic tool holders have a sponge receptacle with a viscous sponge for tip cleaning and also serve as clearly arranged tip holders.

Since the soldering and desoldering tips are only plugged in, they can be easily exchanged using the ERSA tip exchanger 3ZT00164 even when hot.

422 desoldering tip series see page 41

ERSA SMD 8012

ERSA SMD 8013

The **SMD 8012** and **SMD 8013** tip holders are equipped with the latest soldering tips or desoldering tip pairs, in particular for SMD technology. Tips can be stored neatly arranged in a space-saving way for quick access.

The range of currently available soldering tips and desoldering tip pairs, with the component-specific dimensions, can be found on pages 41 and 42.

All soldering tips and desoldering tip pairs are manufactured according to the ERSADUR process. They have excellent thermal conductance and a long service life.

ERSA DIGITAL 2000 A Desoldering Station with Compressor Unit

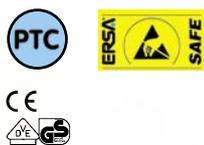

Figure with optional rack

This desoldering station is suitable for removing residual solder and for desoldering wired components, even from multilayer PCBs. The station consists of the ERSA **DIGITAL 2000 A** described on pages 20 and 21, a vacuum unit with the **X-Tool** desoldering iron and the **0A44** tool holder. The desoldering tip is heated by two PTC heating elements. A thermocouple temperature sensor near the desoldering tip immediately reacts to any heat loss. Practically delay-free reheating is therefore ensured. The vacuum for suctioning the liquefied solder is immediately available when the push-button is pressed. The recesses of the tool holder **0A44** allow exchanging inserted soldering tips, even when hot, without an additional tool.

X-Tool with compressor unit

with electronic station 0DIG203A and ERSA SENSOTRONIC control system
722 desoldering tip series see page 39

* incl. tip and cable

CLEAN-AIR Solder Fume Extractions

EasyArm 110 plus

Noxious gases develop during the soldering process due to the use of fluxes. This aspect, together with the fact that condensated flux on the PCB can cause problems results in an increased requirement to use solder fume extraction systems, also with regard to quality.

ERSA Easy Arm solder fume extractions ensure clean boards and a healthy environment in an efficient and economic way when hand soldering. They clear off an entire working area via large nozzles which are available in different designs.

Health Protection During Soldering

The breathing zone lies very close to the soldering process during manual soldering. Suspended particles and gases in the work area cannot be prevented from entering the respiratory system. Noxious gases conveyed through the circulatory system may, over longer periods of time, cause damage to other organs like the liver and kidneys.

The causal relevance of solder fumes to allergic reactions, asthma attacks and chronic bronchitis is medically established.

It must be kept in mind that safeguarding human resources is crucial for any company's success. Risks not detected in due time usually prove more expensive than their prevention would have been.

From a health standpoint, neither eating, drinking nor smoking should be permitted in areas where soldering occurs.

As long as lead-containing solder is used, there is a risk of lead traces remaining on hands entering the human organism through food or cigarettes. For this reason, hands should always be carefully washed after soldering work.

Solder waste and used solder fume filters are hazardous waste and must not be discarded with household rubbish.

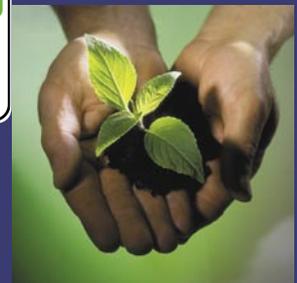

Leadfree
Bleifrei

SAFE

ERSA EA 110 plus Solder Fume Extraction

EA 110 plus

Powerful solder fume extraction unit for the workbench for up to 2 extraction arms.
Please select the extraction arms and nozzles suitable for your requirements from our wide range of accessories.

Table mounting, order no. 3CA06-9001

Application example

Application example

The new EA 110 plus filtering device is a compact and efficient system with economical air recirculation. Thanks to the continuously variable suction power, the device can be adapted to any given situation. It can suction the solder fumes from one or two workplaces effectively and economically.

The variable setup and installation options allow use even where space is limited.

The solder fumes are filtered in two stages: first, the particulate filter removes smallest suspended particles from the suctioned air. Harmful gases are then absorbed in the activated carbon filter.

The powerful suction turbine provides a nearly constant suction flow during the filter's entire service life. The filtering action is monitored by means of a time limit and constant monitoring of the suction power. The user is promptly notified of a necessary filter change by visual and acoustic signals.

For protection of the drive motor, the ERSA EA 110 plus has an automatic cut-off feature.

The combination filter can be changed fast and easily without tools after the housing upper part is removed.

Two suction arms, three suction nozzles and a check valve are available for different work conditions.

The plug-in system with its flexible suction arms allows fast adaptation to altered conditions at the soldering workplace.

Especially noteworthy is the low noise level, allowing use of the device not only in production, but also in repairs, engineering and in the lab. The decentralized design requires no extensive pipe system and affords the greatest possible flexibility.

Order no.	Description	Dimensions (L x W x H)	Rating / Voltage	Volume flow / vacuum	Noise level	Filter
0CA08-002	ERSA EASY ARM EXTRACTION EA 110 plus filter unit	460 x 210 x 470 mm	100 W / 100 - 250 V 50 - 60 Hz	140 m ³ /h max. / 2,200 Pa	51 dB (A) max.	HEPA activated carbon

Accessories for the EA 110 plus

3CA06-4001

Extraction arm with 700 mm flexible hose, incl. connecting hose, table mounting and quick coupling

3CA06-4002

Extraction arm 1,000 mm flexible hose (to be installed directly at the EA 110 plus filter unit) with 2 quick couplings

3CA06-9006

Stop valve for extraction arm

3CA06-5001

3CA06-5004

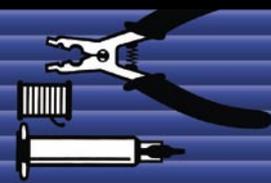

Nozzle "Plus", plastic, ESD, 215 x 90 mm

Accessories & Process Material

All about soldering - supplied from one source: ERSA special devices and tools, temperature measurement devices, auxiliaries and consumables for the production and repair of high-quality boards.

ERSA LVE Solder Wire Feed Unit

LVE Solder Wire Feed Unit

(Delivery including one soldering iron adapter and excluding solder wire and soldering iron)

Discontinued Model
(subject to goods being unsold)

Order no.	Description	Dimensions (L x W x H)	Voltage	Solder wire diameter	Adjustable time	Weight (w/o cable)
OLVE600010	Solder wire feed unit, complete, for CT60/80, CTA60, Basic tool 60/80 soldering irons with tool holder OA34	160 x 80 x 145 mm	230 V, 50 - 60 Hz	1.0 mm	0...2 s	1,250 g
OLVE600010S	Solder wire feed unit, complete, for Power tool, Ergo tool, Tech tool soldering irons with tool holder OA34	160 x 80 x 145 mm	230 V, 50 - 60 Hz	1.0 mm	0...2 s	1,250 g

further diameters on request

The electrically operated ERSA LVE solder wire dispenser precisely feeds solder during soldering. It is primarily used when no "third hand" is available, for example, when soldering stranded wire braids to soldering tags, etc.

The solder wire is fed through a calibrated Teflon hose to the soldering tip to ensure safe transport with minimum friction.

A profiled drive shaft in the gearing part provides the desired feed. The speed and runtime can be separately adjusted, so that the same quantity of solder is always supplied.

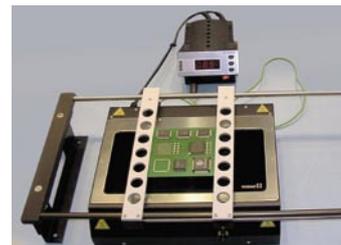

The LVE is controlled by a push-button.

ERSA IRHP 200 Infrared Rework Heating Plate

IRHP 200

Electronically temperature-controlled infrared rework heating plate with integrated thermocouple, incl. control station ORA4500D

Application example with optionally available X/Y PCB table 01R5500-01

The ERSA IRHP 200 is a compact and ergonomically designed heating plate to preheat all SMD components as well as assemblies and substrates during the hand soldering process. It can also be used to reflow solder one-sided SMD boards and for reballing BGAs.

The heating plate temperature can be adjusted continuously from 50 °C to 600 °C.

The IR emitters' even heat distribution ensures non-contact, gentle heating of the assembly. Thus the IRHP 200 is perfectly suited for lead-free applications.

The control station can be placed independently from the heating plate on the workbench in an ergonomically favourable way.

Order no.	Description	Heated area	Rating / voltage	Temperature range	Weight
01RHP200	IRHP 200 infrared rework heating plate with control station ORA4500D	260 x 135 mm (L x W)	max. 800 W / 230 V~, 50 - 60 Hz	50 °C - 600 °C (at the heating element)	approx. 4 kg

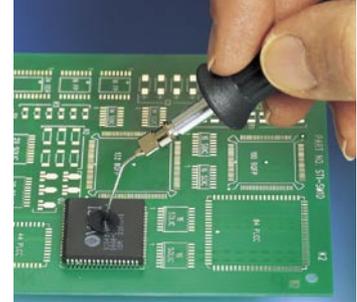

ERSA VP 100 SMD Vacuum Placer

A practical tool for handling and positioning SMD components of varying sizes is the ERSA VP 100.

The smallest components, including MELFs and Mini-MELFs, are fixed in place directly by the vacuum at the end of the suction nozzle. For larger components, one of the three suction cups with the corresponding diameter is used.

The VAC Pen vacuum pipette made of antistatic plastic has a bypass opening. When this opening is closed by the index finger, the vacuum acts on the suction nozzle and the component can be taken up. Component legs are protected and not bent.

A hardly audible magnetic piston pump generates the necessary vacuum.

Order no.	Description	Rating / voltage	Cup diameters	Vacuum	Weight (w/o. cable)
0VP100	VP 100 vacuum placer complete with VAC-Pen 0VP020, bent nozzle, 3 silicone cups 0SVP13A and holder 0A27	2 W / 230/24 V	4 mm, 6 mm, 9 mm	0.2 bar max.	24 g

ERSA SVP 100 Vacuum Pipette

The device can be used to handle nearly all components, except MELFs and Mini-MELFs.

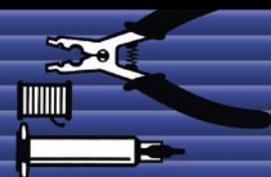

This tool consists of a nickel-plated aluminum handle, sealed at the rear end by a plug.

When opened, replacement tips and suction cups can be stored here.

SVP 100

Order no.	Description	Length	Housing diameter	Cup diameters	Weight
0SVP100	SVP 100 vacuum pipette complete with bent tip 0SVP12K and 3 silicone cups 0SVP13A	150 mm	14 mm	4 mm, 6 mm, 9 mm	69 g

ERSA DTM 50 & DTM 100 Temperature Measuring Devices

Also available
with calibration
certificate

DTM 100

The DTM 100 is equipped with a patented sensor unit (K-type) with sensor wires made of chromel and alumel. It provides exact temperatures of even finest soldering tips.

Also available
with calibration
certificate

DTM 50

temperature measuring device with flexible NiCrNi thermocouple (K-type)

In certified businesses and from a quality standpoint, regular checking of the soldering tip temperature is obligatory. Viewed through their entire service life, ERSA soldering stations are extremely temperature-stable depending on the system.

Possible differences between the rated and actual data due to differences in tips or to slight heating element tolerances in the RESISTRONIC control system can be easily ascertained with the DTM 50 and DTM 100 temperature measuring devices and corrected easily and fast on nearly all ERSA soldering stations.

The measurement is practically conducted by cleaning the heated soldering tip with a moist sponge and soaking it in new solder. The soldering tip is then connected to the given temperature sensor and the temperature determined as soon as the display has stabilized.

Order no.	Description	Measuring range	Operating temperature	Power supply	Dimensions (mm) without sensor unit	Weight
ODTM050	DTM 50 temperature measuring device, packed in a plastic case	-50 °C to +1150 °C	0 °C to +45 °C	9 V flat battery 6F22	100 x 60 x 26 mm	approx. 134 g

ODTM100P	DTM 100 temperature measuring device with calibration certificate, packed in a plastic case	-50 °C to +1150 °C	0 °C to +45 °C	9 V flat battery 6F22	100 x 60 x 26 mm	approx. 134 g

ERSA Desoldering Devices

VAC 2

slim antistatic desoldering device with metal housing

VAC 3

slim antistatic desoldering device with plastic housing

VAC X

antistatic desoldering device with plastic housing

Soldapullt AS 196

proven desoldering device with plastic housing and extremely good recoil damping

The VAC 2, VAC 3 and VAC X desoldering devices are distinguished by their high suction power and low-recoil desoldering. The antistatic design of the devices allows desoldering work on electrostatically endangered assemblies.

The long, slim desoldering tips also allow soldering operations on tightly assembled PCBs.

The Soldapullt AS 196 model is distinguished by extremely good recoil damping and has proven its merit many times over in industry.

The dual seal ring system guarantees constant suction power on a high level.

Order no.	Description	Desoldering tips	Suction capacity
0VAC2	VAC 2 antistatic desoldering device	0VAC22 (2 pcs.)	8.9 cm ³
0VAC3	VAC 3 antistatic desoldering device	0VAC32 (2 pcs.)	10 cm ³
0VACX	VAC X antistatic desoldering device	0VACX2	11.3 cm ³
0AS196	Soldapullt AS 196 antistatic desoldering device	0LS197	34 cm ³

ERSA STR 100 Stacking Rack

The ERSa STR 100 stacking rack can be used for combining two soldering stations or (e.g.) the DIG 2000 A electronic station with the vacuum unit as required (see adjacent illustration) in a practical and space-saving way.

STR 100

stacking rack for a well-organized workplace
(Delivery without soldering stations)

Order no.	Description
0STR100	STR 100 stacking rack to arrange soldering stations in a safe and space-saving way at the workbench

ERSA SR 100 Solder Wire Dispenser

The ERSa SR 100 solder wire dispenser is extremely durable and can accept solder wire reels of up to 1,000 g.

Optimal unwinding of different reels is ensured by a conical centering nut.

The flexibly mounted solder wire guide is suitable for all current solder wire diameters and allows unwinding in the desired direction without having to change the location of the SR 100.

Available as an accessory and easily retrofitted, the ERSa SR 101 kit allows simultaneous use of a second spool.

SR 100

solder wire dispenser
(delivery without solder wire)

SR 101

retrofit kit for a second solder wire spool,
optionally available
(Delivery without solder wire and SR 100)

Order no.	Description	Solder wire spools	Spool receiver diameter
0SR100	SR 100 solder wire dispenser for one spool (without solder wire)	250 g, 500 g, 1,000 g	14 mm
0SR101	Kit for 0SR100 for 2nd spool (without solder wire)	250 g, 500 g, 1,000 g	14 mm

ERSA Tip Exchanger

For changing all internally heated soldering and desoldering tips as well as hot air nozzles, we recommend tip exchanger 3ZT00164 with flat nose pliers and side cutter. These special pliers allow tips to be replaced safely and protectively, even when hot.

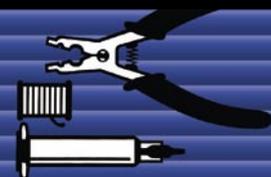

3ZT00164

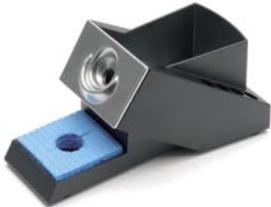

tip exchanger with flat nose pliers and side cutter

Order no.	Description	Application
3ZT00164	Tip exchanger	For changing all internally heated ERSa soldering tips and desoldering tips of the 422 desoldering tip series and 802 hot air nozzles

ERSA Tool Holders and Cleaning Sponges

 0A 04	 0A 05	 0A 13
 0A 17	 0A 18	 0A 19
 0A 41 / 0A 42	 0A 45	 3 N 194
		

Soldering and desoldering devices are heating devices and depending on the application can attain high temperatures during operation. This equipment must never be operated without supervision; during longer interruptions of work they should be switched off and always stored in suitable tool holders.

Most of the ERSA tool holders are made of metal or heat-resistant duroplastic, and most are antistatic.

Most holders have a viscose sponge for tip cleaning, as well as options for conveniently resting and storing soldering and desoldering tips.

Note:

ERSA offers wire mesh to dry clean soldering tips. For further information please refer to: www.ersa.com

Order no.	Description	for
0A04	Tool holder A 04	Soldering irons from 50 W - 150 W output; Isotop and 0180PZ soldering irons
0A05	Tool holder A 05	Medium-sized and small soldering irons
0A17	Tool holder A 17	Soldering irons with an output ranging from 200 W - 550 W

0007G	Viscose sponge, 70 x 46 mm	Tool holder 0A19

ERSA Bar Solder

ERSA bar solder, like solder wire, is recovered from initial melt solder. It is primarily used for filling solder baths. For easier melting, it can be supplied as required in 50 mm sections. In combination with soldering irons of greater power and with suitable flux, bar solder is also used for soldering cable lugs of larger cross-sections and in sheet metal work.

Bar solder

high-quality bar solder recovered from initial melt solder to refill solder baths.

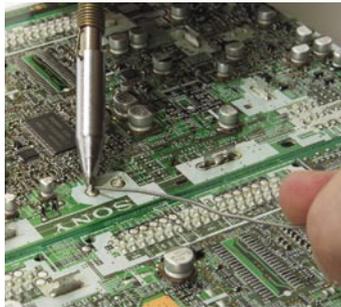

Order no.	Alloy	Melting temperature	Delivered in

ERSA Solder Wire

ERSA solder wire consists exclusively of high-quality raw materials. Manufactured on state-of-the-art machines, the wire meets all quality requirements.

It is manufactured in different dimensions and with different alloys, to meet all practical requirements.

Different types of "flux cores" allow individual adaptation to all soldering needs, especially in electronics and the electronics industry.

Solder wire

available in different alloys and drum sizes in order to meet various fields of application

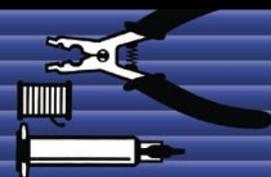

ATTENTION: According to the EU Directive as of July 1, 2006 lead may no longer be used in electronic assemblies (see page 4).

ERSA Desoldering Wicks

Desoldering wicks

Order no.	Description	Package size
0WIC NC1.5/10	No-Clean wicks, length 1.5 m, width 1.5 mm	10 pcs.
0WICKNC1.5/SB	No-Clean wicks, length 1.5 m, width 1.5 mm	single-piece package
0WICKNC2.2/10	No-Clean wicks, length 1.5 m, width 2.2 mm	10 pcs.
0WICKNC2.2/SB	No-Clean wicks, length 1.5 m, width 2.2 mm	single-piece package
0WICKNC2.7/10	No-Clean wicks, length 1.5 m, width 2.7 mm	10 pcs.
0WICKNC2.7/SB	No-Clean wicks, length 1.5 m, width 2.7 mm	single-piece package

ERSA desoldering wicks are saturated with halogen-free No-Clean flux. They are suitable for protectively removing excess solder and old solder, especially from boards carrying SMD components. A fine copper fabric with high capillary power ensures optimal desoldering results. The additional use of a flux cream may be appropriate under certain circumstances.

ERSA Flux and Flux Remover

Flux cream

ERSA No-Clean flux creams available in different quantities

Flux-Pen

Flux Remover

Order no.	Description	Quantities	Danger sign
0FMKANC32-005	No-Clean flux cream, EN 29454/1.1.3 C	5 ml cartridge	1); 3)
0FMKANC32-200	No-Clean flux cream, EN 29454/1.1.3 C	200 ml can	1); 3)

ERSA No-Clean Flux and Flux Cream have proven their merit especially in all repair processes in SMD technology. Like all ERSA consumables, they meet the applicable standards and quality requirements. They can be easily and precisely applied by means of the Flux-Pen or cartridge, supplied with plunger and needle.

Excess residue is removed, if necessary, by means of the Flux Remover with the aid of absorbent, non-pulping paper towels or specially offered ESD-safe products.

1) = Xi Irritating

2) = F+ Highly inflammable

3) = N Environmentally hazardous

ERSA Tip-Reactivator

Tip-Reactivator

Order no.	Description	Quantity	Danger sign
0TR01	Tip-Reactivator, lead-free	15 g can	1)

The ERSA Tip-Reactivator allows the regeneration of oxidized soldering tips. It is environmentally safe, free of lead and halogens and functions even at low soldering tip temperatures. For this purpose the heated soldering tip is wiped on the surface of the regeneration compound.

Soldering and Desoldering Tips

The ERSADUR Tip-Reactivator allows the regeneration of oxidized soldering tips. It is environmentally safe, free of lead and halogens and functions even at low soldering tip temperatures. For this purpose the heated soldering tip is wiped on the surface of the regeneration compound.

Important notice: special care for soldering tips!

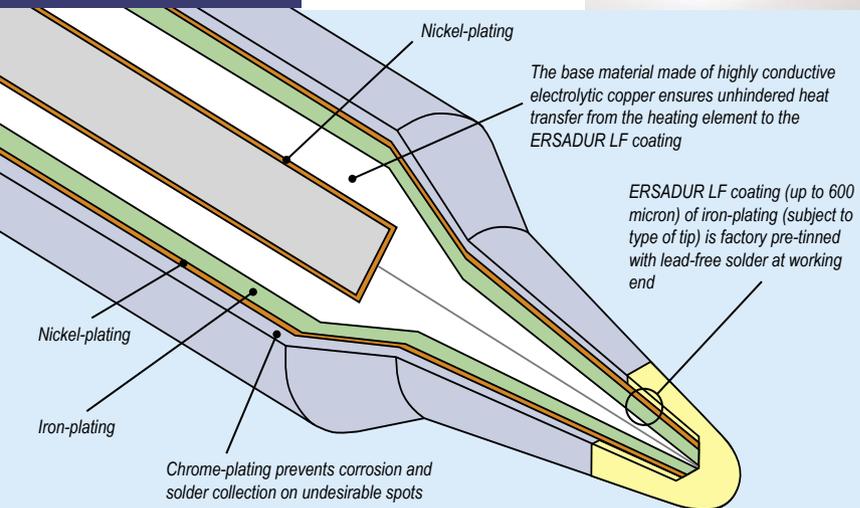

Hand soldering operators are happy when their soldering tips last a long time and continue to solder well. Soldering tips that do not allow the solder to melt rapidly due to excess oxidation clearly disrupt productivity! Special care of the soldering tip should be taken in order to solder efficiently.

Important Facts:

1. When a soldering tip remains hot for a long period of time, the tip will oxidize or blacken. An oxidized tip will no longer „wet“ or melt solder properly.
2. The higher the working temperature of the soldering tip, the faster this oxidation will take place and tip lifetime will be shorter.
3. Soldering irons that automatically go into a lower "stand-by" temperature increase tip life.
4. The oxidation of the tip will be very rapid if the tip is left "cooking" without molten solder covering the tip end. It happens, for example, if the tip is not wetted with solder right after cleaning it.
5. Excessive mechanical force during soldering will shorten the tip life.
6. Proper care of the tip will greatly increase tip life.
7. Lead-free soldering requires higher temperatures, is more aggressive to the tip and will always lead to shorter tip life.

Special Care:

1. Always clean the tip by wiping on a slightly wet sponge after each use. Alternatively, tips can be dry cleaned using wire mesh.
2. Always put fresh solder onto the end of the tip BEFORE putting the tip back into the iron holder.
3. Always use lowest working temperature possible.
4. Never leave an iron "cooking" unattended for some time. Always set iron into automatic stand-by if possible or turn-off when not in use.
5. Never use excessive mechanical force when soldering.
6. Soldering tip oxidation can be easily removed if detected early. Early detection and removal will greatly increase tip life.
7. Tip oxidation removal or tip refurbishing is accomplished in 4 consecutive steps: a. clean on damp sponge, b. clean with wire brush, c. using a Tip re-activator chemical, and d. re-tinning using proper flux cored solder wire.

ERSADUR LF soldering tips to process lead-free solders

Conventional soldering tips can also be used for lead-free solders. Since lead-free soldering requires higher process temperatures, and due to the fact that lead-free solder is more aggressive to the soldering tip, the tip's service life is shorter. ERSADUR LF soldering tips have an increased layer of iron, which increases tip life. Consequently they are especially suitable for lead-free soldering.

ERSA IR Rework Systems

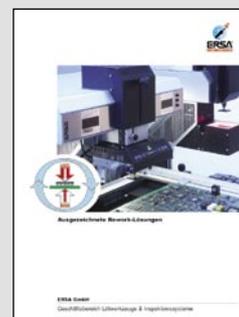

ERSA IR / PL 650 A Rework System

The new ERSA IR / PL 650 A and IR 550 A plus rework systems are the latest additions to ERSA's world renowned and tremendously successful IR rework platform.

This third generation IR rework systems top their award-winning and patented predecessors by offering three new technological innovations: **DynamicIR**,

Multi-True-Closed-Loop-Control and **IntelligentIRS**. Benefitting from an installed base worldwide of more than 5,000 IR rework systems, ERSA's newest system was specifically designed to handle the most difficult rework applications on heavy-mass PCBs and large-format SMT assemblies (18 x 20 inch / 460 x 560 mm) in a lead-free environment. Ease of use, rapid

rework cycle times, widest variety of rework applications and lowest operational costs - these are the well-known user advantages of ERSA's IR rework systems.

Complete solutions for rework made by ERSA.

ERSA Inspection Systems

ERSASCOPE 2 plus

ERSASCOPE Visual Inspection Systems

In 1999, the patented ERSASCOPE was the first visual inspection system which finally made destruction-free inspection of soldering joints beneath a BGA a reality. Under the motto **"To See is to Survive"** this revolutionary technology not only won all of the industry's most significant innovation awards around the globe, but also

allowed previously undetected problems to be discovered, analyzed and corrected at nearly 2,000 of the world's leading manufacturers.

Lead-free implementation will require manufacturers to seriously re-examine their QA procedures, because getting the

lead-free process under control in the initial stages will simply be more difficult.

The bottom line is that higher process temperatures and smaller process windows associated with lead-free will require a much more thorough first article inspection. Manual optical inspection systems will require higher magnification and a flexible viewing angle from 0° to 90°. ERSASCOPE inspection is no longer an option, but rather a lead-free requirement!
